Project Proposal

Intended use of the system

Introduction

Karaoke bars are one of the places people often go to have fun. We designed a website for a karaoke bar called 'Karaoke Night' for our project.

Objectives

- To make it easier for people to learn about karaokenight
- To provide users to access location and contact information about the place
- To enable users to see the options in the karaoke bar
- Provide a web interface for users

Target Customers

Students and also people in that area who love to have fun.

Its Overall Functionality

Website Features and Description

The users of the site can easily access our site at http://karaokenight.com/

1. Users, can learn the prices and types of food and beverages in the menu and drinks section on the site
2. get information about the place from the About us section
3. see the different options in different rooms and the number of capacity for which room from the rooms section
4. look at the events that took place before and look at them, organize their own activities
5. In the photo gallery section, they can see the fun moments of people who have come to the venue before.
6. They can access communication options such as social media, e-mail and phone numbers and the location of Karakokenight from the contact section at the bottom.

Main Components of the System

- o We follow are the basic, key components every website needs**.**These are a homepage, content pages, an about part, a contact part.

- o The homepage is easily one of the most important components of the website. On the website's homepage, the users should be able to navigate to the content like categories and product pages.

- o The about part in the homepage, we don't want to overload the users with too much information, but we also want to leave them feeling informed and confident that the small business is the one for them.

- o Small but effective contact part in the foot of the page that include Email, phone number, social media and address.

Tools and Resources

HTML and CSS are used in the architecture of the site.
